

AMENDMENT TO THE SPECIFICATION

Replace paragraph beginning at line 1, page 12 with the following new paragraph:

The underlay sheet 208 likewise includes a headlap portion 228 and a tab portion 232. As illustrated in Figs. 5 and 7, the headlap portion 228 and the tab portion 232 may include one or more granule patterns thereon. In the illustrated embodiment, the The underlay sheet 208 includes at least one shadow patch 236 and at least one second or non-shadow portion 300. In the illustrated embodiment, two non-shadow portions 300 are shown. It will be understood however, that any desired number of non-shadow portions 300 can be provided. One of the shadow patches 236 has a width W4. The width W4 is a second width. The underlay sheet 208 also preferably includes a headliner shadow 238, which is part of the shadow patch 236.

Replace paragraph beginning at line 6, page 12 with the following new paragraph:

When the overlay sheet 204 is positioned over, and preferably fixed to, the underlay sheet 208, the select tab 234 covers a portion of the shadow patch 236. A portion of the shadow patch 236 is uncovered, and therefore visible. As illustrated in Fig. 5, a portion of the non-shadow portions 300 are also uncovered and therefore visible. In the illustrated embodiment, a portion of the non-shadow portions 300 is visible adjacent at least one the tabs 220. It will be appreciated that the select tab 234 is the tab 220 that covers a portion of the shadow patch 236, and that at least one of the other tabs 220 is disposed such that a portion of the non-shadow portion 300 is visible. The overlay sheet 204 may employ more than one select tab 234 as desired. It will be noted that the width W4 of the shadow patch 236 is greater than the width W1 of the select tab 234, and smaller than a width of the tab portion 232 of the underlay sheet

208. As illustrated in Fig. 7, the The shadow patch 236 is preferably a quadrilateral region, that is smaller than the tab portion 232 of the underlay sheet 208. In a preferred embodiment, the shadow patch 236 is darker or denser in pattern than the pattern of the tabs 220 which the shadow patch 236 borders. A portion of the shadow patch 236 is covered with the select tab 234 to leave a remainder portion 235 of the shadow patch 236 uncovered by the select tab 234. The remainder portion 235 of the shingle 200 is visible, or otherwise detectable. As shown, the remainder portion 235 has a vertical portion 237. The vertical portion 237 of the remainder portion 235 is positioned approximately perpendicular to the longitudinal axis A-A. Also, since the height H1 of select tab 234 is less than the height of the underlay 208, the remainder portion 235 has a horizontal or longitudinal portion 239. The longitudinal portion 239 of the remainder portion 235 is positioned approximately parallel to the longitudinal axis A-A.
